

Your future is looking bright.

Aviation

Overview

The aviation industry is in an expansion phase, with airlines and other aviation related businesses growing, the requirement for skilled aviation professionals both in the air and on the ground will continue to increase. Much of the rapid growth is in specific areas of the world including Asia and the Middle East; and graduates should consider seeking jobs in the International market to take full advantage of the growth in these areas. By 2037 the aviation industry will need more than 2.4 million new aviation personnel (Boeing Pilot and Technician Outlook, 2018).

- Australia's only university with both the Boeing 737 and A320 [flight simulators](#).
- High achieving students will have the opportunity to apply to [Qantas Group Future Pilot Program](#) and the [Qantas Group Pilot Academy](#).
- Take advantage of superior industry experience, with highly trained staff including current and recent Airline, Australian Defence Force and Instructor Pilots and managers.
- Absorb a comprehensive industry overview in the first semester within the Bachelor of Aviation, and then choose to pursue either flight operations or management majors.
- Experience full control and begin flight training in your first year as part of the flight operations stream.

Note: The pilot qualifications obtained by students in the Flight Operations major is a minimum licensing requirement in Australia and employers may have additional requirements. Other countries and airlines may require pilot qualifications to be converted or transferred and may prescribe other requirements or qualifications.
